TI Information handling systems with broadband and narrowband communication channels between repository and display systems

PA International Business Machines Corp., Armonk, NY, United States (U.S. corporation)

DETD In accordance with some embodiments of this invention, the data display system requests files via HTTP commands over the slow, narrowband bidirectional, cellular link, and the repository system responds, perhaps at 250 Kb/sec., downloading the file on the broadband unidirectional TV link. The same model is applicable to the largely one-way cable TV system. A set-top or personal computer system (as described more fully hereinafter) requests a file over a standard telephone modem, and the download comes down a TV channel over the cable. A TV tuner/CDMA demodulator as used in the display system can bridge the cable to a standard data communications port on the computer with blazing speed.

ANSWER 29 OF 46 USPATFULL US 6020880 20000201 PΙ ΑI US 1997-795915 19970205 (8) Method and apparatus for providing electronic program guide information ТT from a single electronic program guide server PA Matsushita Electric Industrial Co., Ltd., Osaka, Japan (non-U.S. AB A method and apparatus for requesting, receiving, processing, and providing information from a single source to a television viewer. An information provider is accessed via a communications link and specific data, which is separate and distinct from video signals received by the television receiver, is downloaded to the television receiver. The data provided by the information provider is database information with minimal formatting and does not contain any graphical overhead. Requests for information from the information provider may be on demand or at a predetermined time. The information provided may be filtered by the information provider and/or television receiver based on selected program categories and/or a user provided SUMM The present invention overcomes the above mentioned disadvantages by providing a method and apparatus for requesting, receiving, processing, and providing information containing substantially all of the television information for a region from a dedicated EPG server to a television viewer. First, a television receiver requests the information by accessing a local information
 provider via a communications link. The specific requested information is downloaded by the server to the television receiver via the communications link and is separate and distinct from video information received by the television receiver. The information provided by the server is minimally formatted and does not contain any graphical information. The received information is processed, formatted, and provided to the viewer for display on the television receiver screen. FIG. 1 is a high level block diagram of the present invention. Television receiver 100 requests EPG information from EPGS 108 through television receiver interface 104 connected to EPGS interface 110 via communications link 106. The requested information is obtained from EPGS database 112 and transmitted from EPGS 108 through EPGS interface 110 over communications link 106 to television receiver interface 104 within television receiver 100. The information is then processed and displayed to the viewer on display 102. DETD FIG. 2 shows exemplary signal flow and control within television receiver 100. Processor 220 initiates and controls interface 204 to request information from EPGS 108 over communications link 206. When EPGS 108 responds with the requested data, interface 204 sends the data to processor 220. Processor 220, which, in this example, is part of the Closed Caption circuit (not shown), decodes and formats the data into RGB data for display. A/V switching circuit 228 is switched to connect the RGB data containing the formatted EPG data to the Video IF (VIF) 222. VIF 222 combines the received information in RGB format, as provided by the closed caption circuit, with the video RGB received from tuner 218 and forwards this combined video to Video Control Jungle (VCJ) logic circuitry 226 for

display on the television receiver screen. VCJ logic circuitry 226 controls the timing of the insertion of the generated text into the active video. Processor 220 may also contain or be connected to a memory (not shown) which holds the formatted data for display on the television

receiver screen. The use of a memory allows the information to be downloaded and stored as encoded data for future use instead of being displayed as it is received. Processor 224 also controls the display of

the on-screen control functions of the television receiver, such as volume level, channel number, color, tint, brightness, contrast, etc. What is claimed is:

1. Apparatus to provide a subscriber with Electronic Program Guide (EPG) information on a television receiver having an on-screen display device which is used to display control functions of the television receiver, the apparatus being for use with an Electronic Program Guide Server (EPGS), the apparatus comprising: a bi-directional communication link interconnecting the television receiver and the EPGS, a database included in the EPGS containing at least one of: a) TV schedule information for substantially all terrestrial broadcast TV stations in a predetermined area, b) TV schedule information for substantially all cable companies in the predetermined area, c) TV schedule information for substantially all satellite TV delivery services in the predetermined area, d) TV schedule information for substantially all telco TV delivery services in the predetermined area, and e) TV schedule information for substantially all other kinds of available TV service to the home in the predetermined area, selection means for selecting data from the database of the EPGS for presentation to the subscriber,

requesting means in the television receiver for requesting data over the bi-directional communication link, receiving means in the television receiver for receiving the requested data over the bi-directional communication link, the requested data being separate from a video input signal received by the television receiver, and processing means for processing the data from said receiving means into data formatted for display using the on-screen display device of the television receiver, and for providing the formatted data to the on-screen display device.

PI AI TI MMUS ANSWER 163 OF 164 USPATFULL picture data base 104, a still picture transmitting apparatus 105, and a main control apparatus 106 for effecting communications of control a subscriber a motion picture program and/or still picture information conventional television broadcasting and satellite broadcasting and the comprises, in association with a program source, a realtime FIG. 3 shows an example of such a broadcasting system. This program data base 102 disposed to transmit in response to a request from broadcasting of programs resident within that station, a motion picture broadcasting source 101 associated with retransmission of the configuration includes a head end or a broacasting station 115, which to the subscriber system, a program transmitting apparatus 103, a still Multimedia bidirectional broadcast system US 1989-394786 information with subscribers so as to control the constituent elements 19890816 (7) 19910625

SUMM program schedule signal 126 of the motion picture realtime broadcast source 101, a motion picture data base 102, a program so as to effect a charge operation of the program for the subscriber, and a modulator/mixer distributor 119 for modulating the program transmit apparatus 125, a main controller 118 for generating a plurality of broadcast transmission lines 5. program signal 4, the broadcast signal 6, and control signal 4 to FIG. 4 shows an example of the broadcast system including a head end produce a frequency multiplexed signal so as to distribute the signal to (broad cast station) 111, which comprises, like in the case of FIG. 3, a a

DETD DRWD DRWD a 3-bit video signal classification code representing a class of an is designated with an 8-bit code. When this code includes "1" in any bit video frame, the number of frames prior to a commercial insertion point video image is created or modified. For frames other than a commercial corresponding to a registered number of an image, which enables up to objective video signal, a 32-bit video signal identification code FIG. 9 shows an example of index information in which there are included advertisement insertion in a realtime broadcast operation; FIGS. 25A to 25F are operation timing charts useful to explain ar positions thereof, it is assumed that the commercial is not to be is recorded a 32-bit history code representing a data and time when the 100 million codes to be controlled for each class. Subsequently, there control employing a data base control table; FIG. 10 is a schematic diagram useful to explain a realtime inserted. As described above, since it is possible to obtain information

of commercial insertions, there is also disposed a field to store written in the code filed. Furthermore, in order to control the number point, a realtime control (associated with the advertisement insertion) can be easily coped with. In a case of a commercial video in a range beginning from a point prior to the commercial insertion frame, the number of frames before the commercial finish point is

In order to achieve a realtime processing of the operation therein a commercial insertion point serial number.

DETD

of the table 155. The commercial insertion mode is defined in conformity disposed in a main control unit 106, the system sends a video data commercial requested by the subscriber in association with the content this purpose. In this system, according to an access sequence table 155 subscriber system. FIG. 1-2 shows a configuration of means adopted for It is also possible to process the commercial insertion on the side of a standby state. In this situation, when the number of frames becomes to table 134 so as to set an initiation of the pertinent data bases to the above, when the number of frames prior to the commercial insertion point (255 in the decimal notation), the system starts referencing the control (commercial finish point) becomes to be equal to or less than "11111111" the data bases thus kept in the standby are initiated.

above, it is not necessary for the head end 115 to conduct the realtime data access control. Namely, the head end 115 need only realtime fashion; moreover, the configurations of the various result, the head end 115 need not achieve the data access control in a commercial insertion and hence can be successive transmitted. As a addition, the various video data items are not interrupted due to the transmit a commercial associated with the video data before a point of time when the commercial is to be inserted into the video data. In

with Table 1. In this case, however, unlike the means or embodiment 1

DETD

embodiment in which there is first disposed a 3-bit classification code For the realtime processing of the operation above, at a point disposed a field of a commercial insertion point serial number. order to control the number of commercial insertions, there is also commercial finish point is loaded in the code field. Furthermore, in case of the commercial video frame, the number of frames prior to the with a realtime control (of the commercial insertion). In a of time preceding the commercial insertion point, it is easy to cope since the information can be obtained in a range beginning from a point assumed that a commercial insertion is not effected. In this fashion, number of frames prior to the commercial insertion is designated with an video image is created or edited is recorded in a form of a 32-bit 4000 million data items for each class. Next, the date and time when the video image. With the provision above, it is possible to control up to exists a 32-bit video code corresponding to the registered number of a representing a class of an objective video signal. Subsequently, there FIG. 11 shows an example of index information associated with the of time when the number of frames (prior to a commercial finish point) 8-bit code. When all positions of this code is occupied by "1", it is history code. For the frames other than the commercial video frame, the transmitting apparatuses and the main control unit 106 are simplified

7	Coin operated	
8	Having variable cost or free preview period	
9	USE SURVEYING OR MONITORING (E.G., PROGRAM OR CHANNEL WATCHE	(D)
10	. Monitoring physical reaction or presence of viewer	,
11	With entry of user identification	
12	By passive determination and measurement (e.g., by detecting motion or ambient temperature	e, or by use of
	video camera)	. •
13	. Manual entry (e.g., using keypad or by written response)	
14	. By passively monitoring receiver operation	
15	By detecting local oscillator or IF signal	
16	By polling	
17	By monitoring sync or blanking pulse	
18	By use of audio signal	
<u>19</u>	By use of pattern recognition or signature	
20	By data encoded in video signal (e.g., VBI data)	
21	Combined with detecting VCR operation	
<u>22</u>	COMMERCIAL OR PROGRAM AIRING VERIFICATION SYSTEM	
23	SYSTEM FOR AWARDING COUPON, TOKEN, OR CREDIT	
<u>24</u>	INTERACTIVE OPINION POLLING	2
13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36	ACCESS CONTROL OR BLOCKING	5838318W
<u>26</u>	. By mechanical lock	C/38 . 8 W
<u>27</u>	. Of specific channel	48 5310
<u>28</u>	. Of specific program (e.g., based on program rating)	4,
<u>29 </u>	. Time dependent (e.g., time spent viewing program, time of day, etc.)	•
<u>30</u>	. Access via PIN or password	
<u>31</u>	. With encryption or scrambling of video signal	
<u>32</u>	PROGRAM, MESSAGE, OR COMMERCIAL INSERTION OR SUBSTITUTION	
33	Emergency warning	
<u>34</u>	. Specific to individual user or household	37-56
<u>35</u>	. Based on demographics of geographical area	
	. Insertion of local commercial or local program at headend or network affiliate	
<u>37</u>	OPERATOR INTERFACE	
38	To facilitate tuning or selection of video signal	•
39	Electronic program guide —	
<u>40</u>	For displaying additional information	
41	Video still or clip	
42	Commercial or advertisement	
43	With separate window, panel, or screen	
44	Content arrangement	
45	Based on genre, theme, or category	
40	Based on personal preference, profile, or viewing history (e.g., to produce redacted listing)	
4/	User customization of display content	`
40	Combined from plural information providers (e.g., combined terrestrial and satellite sources	_
4 9 50	Combined at local receiver	
39 41 42 43 44 45 46 47 48 49 50 51	Information updating Having link to external information resource (e.g., online resource)	
<u>J 1</u>	Having link to external information resource (e.g., oninie resource)	

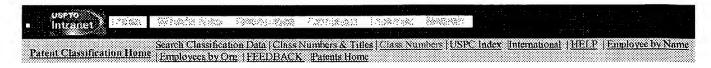

60	
<u>52</u>	Navigational feature
53	Searching (e.g., by title or actor's name)
54	Transmission scheme
55	Provided on recordable medium
56	Channel guide (i.e., channel-specific as opposed to program-specific guide)
<u>57</u>	Tune-by-label (i.e., channel selection by alphanumeric character entry)
<u>58</u>	Program reserve or reminder system
53 54 55 56 57 58 59 60	Selecting from multiple inputs or sources
60	. Interactive product selection
61-	. Interactive program selection
<u>62</u>	CELLULAR VIDEO DISTRIBUTION SYSTEM
61 62 63 64 65	SATELLITE VIDEO DISTRIBUTION SYSTEM
<u>64</u>	. Two-way
<u>65</u>	Return path
<u>66</u>	Terrestrial return path
<u>67</u>	Transmitter
<u>68</u>	Receiver
<u>69</u>	Polarization of signal
<u>70 </u>	For digital signal
<u>71 </u>	For providing signals to plural subsequent receivers
<u>72</u>	Antenna initialization, calibration, or aiming
<u>73</u>	TERRESTRIAL MICROWAVE VIDEO DISTRIBUTION SYSTEM
<u>74 </u>	LOCAL VIDEO DISTRIBUTION SYSTEM
70 71 72 73 74 75 76 77 78	. Vehicle
<u>76 </u>	Airplane
<u>77 </u>	Seat-back terminal
<u>78</u>	Multiunit or multiroom structure (e.g., home, hospital, hotel, office building, school, etc.)
<u>79 </u>	Using existing power network
<u>80</u>	Coordinating diverse devices
<u>81</u>	Using wireless link
<u>82</u>	Local server or headend
<u>83</u>	Having additional amenity (e.g., access to outside network, room service, etc.)
84 85 86 87	Combined with call bell system for hospital use
<u>85</u>	Receiver
<u>86</u>	USER-REQUESTED VIDEO PROGRAM SYSTEM
<u>87</u>	. Video-on-demand
88	VCR-like function
<u>89</u>	By use of memory at receiver
<u>90</u>	With particular transmission scheme (e.g., transmitting I-frames only)
<u>91</u>	Server or headend
92	Mass storage
93	Control process
94 95 96	Buffering and switching
95	Channel or bandwidth allocation
<u>96</u>	In accordance with server or network congestion
<u>97</u>	Scheduling (e.g., grouping users together)
98	Transmission network
99	Using telephone network
100	Receiver (e.g., set-top box)
101	Near video-on-demand system (i.e., providing plural, time-staggered versions of same program)
102	VCR-like function
103	Server or headend
104	. Pay-per-view
105	VIDEO DISTRIBUTION SYSTEM WITH UPSTREAM COMMUNICATION Telephony via television distribution notwork
<u>106</u> 107	Telephony via television distribution network
107 108	. Remote testing of cable system . Alarm system using television network
108 109	
110 /	Having link to external network (e.g., interconnected computer network)
110 111	Connection to external network at receiver (e.g., set-top box) Cable modem
111 /	Link transmission (e.g., URL sent to user)
112	Dark denomination (c.g., OND soll to user)

	·
<u>113</u>	Conveyed in video image
<u>114</u>	. Server or headend
<u>115</u>	Data storage or retrieval
<u>116</u>	Control process
<u>117</u>	Communications interface
<u>118</u>	. Transmission network
<u>119</u>	Having significant intermediate network unit (e.g., hub, substation, etc.)
<u>120</u>	With two-way connection from unit to receiver (e.g., for the purpose of channel selection)
<u>121</u>	Return path
<u>122</u>	Return path via telephone network
<u>123</u>	Wireless return path
<u>124</u>	Noise in return path
125	Ingress noise
126	Detail of use of two-way spectrum
<u>127</u>	Network component (e.g., filter, tap, splitter, amplifier, repeater, etc.)
128	Diplex filter
129	Hybrid fiber-coax network
130	Power signal over network
131	Receiver (e.g., set-top box)
132	Programmable or upgradeable
133	With diverse device (e.g., personal computer, game player, VCR, etc.)
134	Having particular storage feature
<u>135</u>	VIDEO DISTRIBUTION SYSTEM WITH LOCAL INTERACTION
<u>136</u>	. Interactive data transmitted in video signal band (e.g., VBI or HBI data)
<u>137</u>	Teletext
<u>138</u>	. Headend
<u>139</u>	. Receiver (e.g., set-top box)
140	Programmable or upgradeable
<u> 141</u>	With diverse device (e.g., personal computer, game player, VCR, etc.)
142	Having particular storage feature
143	VIDEO DISTRIBUTION SYSTEM COMPONENTS
<u>144</u>	. Headend
<u>145</u>	Data storage or retrieval
<u>146</u>	Control process
<u>147</u>	Communications interface
<u>148</u>	. Transmission network
149	Network component (e.g., filter, tap, splitter, amplifier, repeater, etc.)
150	Power signal over network
<u>151</u>	Receiver (e.g., set-top box)
152	Programmable or upgradeable
153	With diverse device (e.g., personal computer, game player, VCR, etc.)

Class 348	TELEVISION
	a PDF version of this file
	•
14.01	TWO-WAY VIDEO AND VOICE COMMUNICATION (E.G., VIDEOPHONE)
14.02	Over wireless communication
14.03	. User interface (e.g., touch screen menu)
<u>14.04</u>	Operating with other appliance (e.g., TV, VCR, FAX, etc.)
<u>14.05</u>	. Remote control
<u>14.06</u>	. Answering machine
<u>14.07</u>	. Display arrangement (e.g., multiscreen display)
<u>14.08</u>	. Conferencing (e.g., loop)
<u>14.09</u>	Conferencing with multipoint control unit
<u>14.1</u>	Motion image conferencing
<u>14.11</u>	Switching
14.12	Transmission control (e.g., resolution or quality)
14.13	Compression or decompression
14.14	Still frame (e.g., freeze frame)
14.15	Field or frame difference (e.g., moving frame)
14.16	. User positioning (e.g., parallax)
	PLURAL TRANSMITTER SYSTEM CONSIDERATIONS (E.G., INTERFERENCE REDUCTION)
22	SLOW SCANNING TRANSMISSION (E.G., STILL FRAME)
21 22 23	. Color TV
24	PLURAL STILL IMAGES OVER CONVENTIONAL CHANNEL
24 25	IMAGE FALSIFICATION TO IMPROVE VIEWER PERCEPTION OF SELECTIVE OBJECT
<u>23</u>	(E.G., MOVING OBJECT OR TARGET)
26	Contour generator
2 <u>0</u> 27	. Quantizer
29	. Selective contrast expander
20	. False color
29	
<u>30</u>	Hue expander
31	BACK SCATTER REDUCTION
32	PSEUDO COLOR
<u>33</u>	Multispectral to color conversion (e.g., infrared and visible, infrared bands, etc.)
26 27 28 29 30 31 32 33 34 35 36 37 38	. Including intensity to color conversion (e.g., colorizer, etc.)
<u>35</u>	PSEUDO BLACK AND WHITE
36	PANORAMIC
37	. With continuously rotating element
38	. Multiple channels
<u>39</u>	. With observer selected field of view
<u>40</u>	HOLOGRAPHIC
<u>41</u>	. Color TV
<u>42</u>	STEREOSCOPIC
<u>43</u>	. Signal formatting
44	. Pseudo
<u>45</u>	. Endoscope
<u>46</u>	. Picture signal generator
<u>47</u>	Multiple cameras
<u>48</u>	More than two cameras
<u>49</u>	Single camera with optical path division
<u>50</u>	Single camera from multiple positions
51	Stereoscopic display device
52	More than two display devices
53	Viewer attached
54	Single display with optical path division
40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55	Separation by time division
	

<u>56</u>	With alternating shutters
<u>57</u>	With alternating polarization
<u>58</u>	Separation by polarization
<u>59</u>	Separation by lenticular screen
<u>60</u>	Separation by color (i.e., anaglyphic)
61	SPECIAL APPLICATIONS
62	. Aid for the blind
63	Image magnifying
64	. Combined electronic sensing and photographic film cameras
<u>65</u>	. With endoscope
	•
66	Dental
<u>67</u>	Laser
<u>68</u>	. Illumination
<u>69</u>	Controlled by video signal
<u>70 </u>	Color sequential illumination
<u>71 </u>	Color TV
<u>72 </u>	Plural endoscopes interchangeable
<u>73 </u>	External camera
74	With additional adjunct (e.g., recorder control, etc.)
75	Adaptor or connector
76	Physical structure of circuit element
77	. Human body observation
77 78	
	Eye
<u>79</u>	Microscope
80	Electronic
<u>81</u>	. Underwater
<u>82</u>	. Hazardous or inaccessible
<u>83</u>	Furnace (e.g., nuclear reactor, etc.)
<u>84</u>	Pipeline
<u>85</u>	Borehole
86	. Manufacturing
87	Electronic circuit chip or board (e.g., positioning)
88	Web, sheet or filament
89	Agricultural or food production
90	Welding
<u>91</u>	Sorting, distributing or classifying
$\frac{92}{93}$	Quality inspection
93	Color TV
94	Position detection
<u>95</u>	Alignment or positioning
<u>96</u>	. Film, disc or card scanning
<u>97</u>	Motion picture film scanner
<u>98</u>	Mechanical optical scanning
<u>99</u>	Flying spot scanner
<u>100</u>	Flying spot scanner
<u>101</u>	Color TV
102	Intermittent film movement
103	With modification of scanner sweep
104	Color TV
105	Intermittent film movement
106	With modification of scanner sweep
107	With record location
108 100	Flying spot scanner
109 110	Color TV
<u>110</u>	Slide
111	Color TV

<u>177 </u>	DISPLAY OR RECEIVER WITH BUILT-IN TEST SIGNAL GENERATOR, TEST PATTERN, OR ADJUSTING ADJUNCT
<u>178</u>	. Setup
	•
179 180	Color match comparator
180	MONITORING, TESTING, OR MEASURING Test signal conceptor
181	. Test signal generator Chroma or color bar
182	
183	VITS or ILTS . Monitor
184	
185	Combined plural functions (e.g., picture and waveform monitor)
186 187	Vectorscope
187	Testing of camera
188	Using test chart
189	. Testing of image reproducer
190	Alignment-manufacturing
191 102	Display photometry
192 103	. Transmission path testing
193	Signal to noise ratio
194	Synchronization (e.g., H-sync to subcarrier)
<u>195</u>	MECHANICAL OPTICAL SCANNING
<u>196</u>	. Color TV
<u>197</u>	With fiber optics
<u>198</u>	By acoustic wave
<u>199</u>	. Moving aperture
<u>200</u>	Drum or belt
<u>201</u>	Multiple scanning elements
<u>202</u>	Moving lens or refractor
203	Moving reflector
<u>204</u>	Helical element
<u>205</u>	Vibrating or oscillating
<u>206</u>	SPECIAL SCANNING (E.G., SPIRAL, RANDOM, ZIGZAG)
<u>207</u>	CAMERA, SYSTEM AND DETAIL
<u>208</u>	Camera image stabilization
<u>209</u>	With flying spot scanner
210	For color scanning
<u>211</u>	. Remote control
<u>212</u>	By multiplexed control signals (e.g., duplexing, etc.)
<u>213</u>	Preprogrammed or stored control instructions
214	Body movement actuation
<u>215</u>	With streak device
<u>216</u>	Low light level
<u>217</u>	With image intensifier
<u>218</u>	. Unitary image formed by compiling sub-areas of same scene (e.g., array of cameras)
219 220	. Swing driven
<u>220</u>	. Still and motion modes of operation
<u>221</u>	Exposure control
<u>222</u>	Combined image signal generator and general image signal processing
223	Color balance (e.g., white balance)
<u>224</u>	Dependent upon operation or characteristic of iris, flash, lens, or filter
<u>225</u>	With means for preventing colored object from effecting color balance
<u>226</u>	Including flicker detection (e.g., fluorescent)
<u>227</u>	With ambient light sensor
228 220	Responsive to output signal
229 230	Combined automatic gain control and exposure control (i.e., sensitivity control)
230 231	Readout of solid-state image sensor considered or altered
<u>231</u>	With details of static memory for output image (e.g., for a still camera)
232 233	With storage of additional, non-image information (e.g., audio, time, date)
233 234	Detachable Details of hyminanes signal formation in solar gamera
234 235	Details of luminance signal formation in color camera With means for providing high band and low band luminance signals
<u>235</u> <u>236</u>	Using distinct luminance image sensor
<u> 230</u>	Osing distinct inimiance make sensor

<u>237</u>	For single sensor time comers supplying plural color signals
	For single sensor type camera supplying plural color signals
238	Using distinct luminance image sensor
239 240	Camera and video special effects (e.g., subtitling, fading, or merging)
<u>240</u>	Electronic zoom
241	Including noise or undesired signal reduction
<u>242</u>	Color TV
<u>243</u>	Dark current
<u>244 </u>	With control of sensor temperature
<u>245</u>	Using dummy pixels
<u>246</u>	Defective pixel (e.g., signal replacement)
<u>247</u>	With memory of defective pixels
<u>248</u>	Smear
249	In charge coupled type sensor
250	In charge coupled type sensor
251	Shading or black spot correction
252	With transition or edge sharpening (e.g., aperture correction)
253	Color TV
254	Gray scale transformation (e.g., gamma correction)
255 256	Amplitude control (e.g., automatic gain control)
<u>256</u>	Color TV (e.g., saturation)
<u>257</u>	With DC level control
<u>258</u>	With bias illumination
<u>259</u>	Combined with color separating optical system
<u>260</u>	For single scanning device color camera
<u> 261</u>	Plural bias illuminators
<u>262</u>	. With plural image scanning devices
<u> 263 </u>	Color imagery registration
264	Scanning devices offset in the image plane
265	Each supplying only one color signal
266	. With single image scanning device supplying plural color signals
267	Separate complete images on face of pickup device
268	Color sequential
269	With color sequential illumination
<u>270</u>	With moving color filters
270 271	
	Four or more color types
<u>272</u>	Solid-state multicolor image sensor
273	With color filter or operation according to color filter
<u>274</u>	Having overlapping elements
<u>275</u>	Staggered or irregular elements
<u>276</u>	Including transparent elements
<u>277 </u>	With three or more colors
<u>278 </u>	Based on more than four colors
<u>279 </u>	Based on four colors
<u>280</u>	Based on three colors
281	X-Y architecture
<u>282</u>	Charge coupled architecture
283	With multiple output registers
284	Cathode-ray tube
285	Phase separable signals
286	With indexing
287	Conductive grid at target
288	Index elements outside of image area
289	
	Frequency separable signals
<u>290</u>	Specified optical filter arrangement
<u>291</u>	Combined with grating, lens array, or refractor
<u>292</u>	Having diagonally arranged stripes
<u>293</u>	Interdigital signal electrodes
<u>294</u>	Solid-state image sensor
<u>295</u>	Time delay and integration mode (TDI)
<u>296</u>	Electronic shuttering
<u>297 </u>	Accumulation or integration time responsive to light or signal intensity

298 ... In charge coupled type image sensor 299 With overflow gate or drain .. With amplifier 300 301 ... Pixel amplifiers 302 .. X - Y architecture ... With charge transfer type output register 303 ... With charge transfer type selecting register 304 ... With interlacing 305 ... Charge injection device (CID) 306 307 ... Photosensitive switching transistors or "static induction" transistors 308 ... Including switching transistor and photocell at each pixel site (e.g., "MOS-type" image sensor) ... Exclusively passive light responsive elements in the matrix 309 With diode in series with photocell 310 .. Charge-coupled architecture 311 ... With timing pulse generator 312 ... With bias charge injection 313 ... With excess charge removal (e.g., overflow drain) 314 315 ... With staggered or irregular photosites or specified channel configuration ... Charges transferred to opposed registers 316 317 ... Field or frame transfer type With recirculation of charge 318 Charges alternately switched from vertical registers into separate storage registers; or having vertical transfer 319 Interline readout 320 <u>321</u> Using multiple output registers 322 ... Interline readout <u>323</u> Using multiple output registers <u>324</u> ... Line transfer type 325 . Cathode-ray tube .. Automatic beam focusing or alignment <u>326</u> <u>327</u> .. Automatic beam current control 328 .. Remanent image erasure 329 .. With emissive target or photocathode (e.g., orthicon) ... Dissector tube 330 <u>331</u> .. With photoconductive target (e.g., vidicon) . Array of photocells (i.e., nonsolid-state array) 332 333.01 . With electronic viewfinder or display monitor 333.02 .. With display of additional information 333.03 ... Including display of a frame and line of sight determination 333.04 ... Including warning indication 333.05 .. Display of multiple images (e.g., thumbnail images, etc.) 333.06 .. Movable or rotatable unit 333.07 ... Detachable 333.08 .. Including optics 333.09 ... With optical viewfinder (e.g., correction for parallax, etc.) <u>333.1</u> ... With projector function .. Use for previewing images (e.g., variety of image resolutions, etc.) 333.11 .. Modification of displayed image 333.12 333.13 .. Power saving mode . Optics <u>335</u> .. Color separating optics <u>336</u> ... Prism arrangement 337 With dichroic layer or air gap between prism sections <u>338</u> ... Exclusively dichroic elements 339 340 .. With optics peculiar to solid-state sensor .. Optical viewfinder 341 342 .. With frequency selective filter (e.g., IR cut, optical LPF, etc.) .. Optical multiplexing 343 <u>344</u> .. Optical path switching .. Focus control 345 <u>346</u> ... With display of focusing condition or alarm

247	With many position detection or intermelated iris control
347	With zoom position detection or interrelated iris control
348	Using active ranging
<u>349</u>	Using image signal
<u>350</u>	With auxiliary sensor or separate area on imager
<u>351</u>	With oscillation of lens or sensor to optimize error signal
<u>352</u>	With motion detection
<u>353 </u>	By detecting contrast
<u>354 </u>	By analyzing high frequency component
<u>355 </u>	Plural high frequencies
<u>356</u>	Detection of peak or slope of image signal
<u>357</u>	Servo unit structure or mechanism
<u>358</u>	Variable magnification (i.e., zoom)
<u>359</u>	Fiber optics
<u>360</u>	Lens or filter substitution
361	Automatic
362	Exposure control
363	Automatic control of iris, stop, or diaphragm
364	Based on image signal
365	Contrast
366	Based on ambient light
367	Periodic shuttering
368	Rotary
369	Changing viewing angle via optics
370	With object or scene illumination
371	Flash or strobe
372	. Power supply
373	. Support or housing
374	For internal camera components
375	For specified accessory
376	Portable or hand-held
377	CATHODE-RAY TUBE DISPLAY EXCESSIVE VOLTAGE CONTROL
377 378	. With disabling
379 379	CATHODE-RAY TUBE DISPLAY AUTOMATIC BLACK LEVEL BIAS CONTROL
380	CATHODE-RAY TUBE DISPLAY BEAM CURRENT CONTROL
381	With beam energy determining color
382	Variable depth of penetration of electron beam into the luminescent layer
383	MODULAR IMAGE DISPLAY SYSTEM
384.1	BANDWIDTH REDUCTION SYSTEM
385.1	Plural video programs in single channel
386.1	Color television
387.1	Data rate reduction
388.1	. Multiple channel (e.g., plural carrier)
389.1	Including one conventional or compatible channel (e.g., two channel NTSC systems)
390.1	Data rate reduction
391.1	Specified color signal
392.1	Sub-Nyquist sampling
393.1	Direct coding of color composite signal
393.1 394.1	Predictive coding
394.1 395.1	Transform coding
	Including luminance signal
<u>396.1</u>	Using separate coders for different picture features (e.g., highs, lows)
397.1	Subband encoding (e.g., low horizontal/low vertical frequency, low horizontal/high vertical frequency)
398.1 399.1	Picture feature dependent sampling rate or sample selection
399.1 400.1	Produre feature dependent sampling rate or sample selection Involving hybrid transform and difference coding
<u>400.1</u>	
<u>401.1</u>	With prior difference coding
402.1	Including motion vector
403.1	Involving transform coding
404.1	Adaptive
405.1	Sampling
<u>406.1</u>	Normalizer
<u>407.1</u>	Motion

. Audio

408.1 ... Transformed sample selection (e.g., hierarchical sample selection) 409.1 .. Involving difference transmission (e.g., predictive) 410.1 ... Involving both base and differential encoding 411.1 ... Plural predictors 412.1 Including temporal predictor (e.g., frame difference) Including motion vector 413.1 414.1 Involving pattern matching ... Including temporal prediction (e.g., frame difference) 415.1 416.1 Including motion vector 417.1 Involving pattern matching 418.1 ... Involving pattern matching 419.1 ... Coding element controlled by buffer fullness 420.1 .. Involving block coding 421.1 ... Involving minimum, maximum, or average of block <u>422.1</u> .. Involving pattern matching <u>423.1</u> .. Arrangements for multiplexing one video signal, one or more audio signals, and a synchronizing signal 424.1 .. Sub-Nyquist sampling 424.2 ... Adaptive 425.1 .. Associated signal processing ... Involving error detection or correction <u>425.2</u> ... Involving signal formatting 425.3 425.4 ... Involving synchronization . Format type 426.1 427.1 .. Including frequency folding (e.g., subsampling) 428.1 ... Spotwobble (e.g., pixels from plural lines form single transmitted line) 429.1 ... Including video-related information ... Using two or more frames 430.1 431.1 Motion adaptive 432.1 .. Added video information in standard channel format 433.1 ... Including additional modulation of picture carrier (e.g., quadrature) 434.1 ... Including information in sync, blanking, or overscan 435.1 During vertical blanking interval <u>436.1</u> ... Including use of a subcarrier <u>437.1</u> .. Individual processing of different parts of image frequency band (e.g., sum and difference, high band/low 438.1 . Individual processing of different parts of image frequency band (e.g., sum and difference, high band/low 439.1 . Frame field or line dropping followed by time expansion and time compression 440.1 . Scan rate variation 441 FORMAT CONVERSION <u>442</u> . Involving polar to Cartesian or vice versa . Involving both line number and field rate conversion (e.g., PAL to NTSC) 443 444 .. Specified chrominance signal <u>445</u> . Conversion between standards with different aspect ratios <u>446</u> . Progressive to interlace 447 . Field rate type flicker compensating <u>448</u> . Line doublers type (e.g., interlace to progressive IDTV type) 449 .. Including nonstandard signal detection <u>450</u> .. Specified chrominance processing (e.g., Y/C separation) <u>451</u> ... Motion adaptive <u>452</u> .. Motion adaptive <u>453</u> . Specified chrominance processing <u>454</u> .. PAL to NTSC or vice versa <u>455</u> .. In which simultaneous signals are converted into sequential signals or vice versa <u>456</u> ... Field or frame sequential to simultaneous 457 .. Frequency change of subcarrier 458 . Changing number of lines for standard conversion <u>459</u> . Changing number of fields for standard conversion 460 DIVERSE DEVICE CONTROLLED BY INFORMATION EMBEDDED IN VIDEO SIGNAL 461 NONPICTORIAL DATA PACKET IN TELEVISION FORMAT <u>462</u>

<u>463</u>	. Full field
<u>464</u>	. Sync
465	. Data separation or detection
466	. Error correction or prevention
467	. Data format
468	. Including teletext decoder or display
469	FORMAT
<u>470</u>	Adapted to reduce noise or for frequency modulation (e.g., variable gain)
<u>471</u>	Including pulse modulation of video signal (e.g., pulse width, PAM)
<u>472</u>	Pulse code modulation
<u>473 </u>	. Including additional information
<u>474 </u>	For controlling video processing (e.g., digitally assisted video)
<u>475</u>	Additional modulation of picture carrier (e.g., quadrature)
<u>476</u>	During sync, blanking, or overscan
477	During both vertical and horizontal blanking
478	During vertical blanking
479	During horizontal blanking
480 480	Sound signal
481	Plural (e.g., stereo or SAP)
<u>482</u>	Sound signal
<u>483</u>	Plural (e.g., stereo or SAP)
<u>484</u>	Sound signal
<u>485</u>	Plural (e.g., stereo or SAP)
<u>486</u>	Including the use of a subcarrier
<u>487</u>	. Broadband (e.g., occupying two adjacent channels or parts thereof)
488	. Specified color signal format
489	Time division multiplexing of luminance and chrominance (e.g., MAC)
490	Field or frame sequential systems
491	Simultaneous and sequential (e.g., SECAM)
<u>492</u>	Simultaneous signals
493	Luminance plus dual-phase modulated color carrier
494	Dot sequential
<u>495</u>	. Of sync signal
<u>496</u>	Color
<u>497</u>	FLUTTER OR JITTER CORRECTION (E.G., DYNAMIC REPRODUCTION)
<u>498</u>	. Specified color
499	Using frequency shifting (e.g., heterodyne)
<u>500</u>	SYNCHRONIZATION
501	Reprocessing
502	Specified color
503	For sequential color components
<u>504</u>	With line rate switch (e.g., SECAM)
<u>505</u>	Phase locking regenerated subcarrier to color burst
<u>506</u>	Burst gate
<u>507</u>	Including demodulator
<u>508</u>	Digital
<u>509</u>	With line rate switch (e.g., PAL)
<u>510</u>	. Locking of computer to video timebase
<u>511</u>	. Control of picture position
512	Locking of video or audio to reference timebase
513	Frame or field synchronizers
514	Color television
515	Audio to video
<u>516</u>	
	By controlling video or sync generator
<u>517</u>	Color television
<u>518</u>	Including compensation for transmission delays
<u>519</u>	Color television
<u>520</u>	Color
<u>521</u>	. Sync generation
<u>522</u>	Means on video signal generator
<u>523</u>	With addressable memory

504	With courts on Granum and dividen
<u>524</u>	With counter or frequency divider
<u>525</u>	Sync separation
<u>526</u>	Field or frame identification
<u>527</u>	Color
<u>528</u>	Including automatic gain control (AGC)
<u>529</u>	To produce distinct vertical output
<u>530</u>	With distinct horizontal output
<u>531</u>	To produce distinct horizontal output
<u>532</u>	By amplitude
<u>533</u>	Noise reduction
534	Amplitude limiting
<u>535</u>	Noise inversion
536	. Automatic phase or frequency control
537	Of sampling or clock
<u>538</u>	With data interpolation
<u>539</u>	Color
<u>540</u>	Horizontal sync component
	Cascaded phase or frequency adjusting
<u>541</u>	
<u>542</u>	Plural distinct operating modes
<u>543</u>	Line rates
544	Locking rates
<u>545</u>	Different mode during vertical blanking
<u>546</u>	Countdown
<u>547</u>	Vertical sync component
<u>548</u>	Countdown
<u>549</u>	Using color subcarrier
<u>550</u>	. To achieve interlaced scanning
<u>551</u>	. Of mechanical scan
552	COMBINED WITH DIVERSE ART DEVICE (E.G., COMPUTER, TELEPHONE)
<u>553</u>	BASIC RECEIVER WITH ADDITIONAL FUNCTION
<u>554</u>	. Multimode (e.g., composite, Y, C; baseband RF)
555	For receiving more than one format at will (e.g., NTSC/PAL)
<u>556</u>	For format with different aspect ratio
<u>557</u>	Color processing
<u>558</u>	Format detection
<u>559</u>	. Instant replay or freeze frame
<u>560</u>	Color television processing
<u>561</u>	. For magnification of part of image
<u>562</u>	Color television
<u>563</u>	. For display of additional information
<u>564</u>	Simultaneously and on same screen (e.g., multiscreen)
<u>565</u>	Picture in picture
<u>566</u>	Color television
<u>567</u>	Memory
<u>568</u>	Compression
<u>569</u>	Receiver indicator (e.g., on screen display)
<u>570</u>	Tuning indication
<u>571</u>	IMAGE SIGNAL PROCESSING CIRCUITRY SPECIFIC TO TELEVISION
<u>572</u>	. A/D converters
<u>573</u>	Analog to binary
<u>574</u>	Including dither
<u>575</u>	. Video reprocessing
<u>576</u>	. Selective image modification (e.g., touch up)
<u>577</u>	Color change type
<u>578</u>	. Special effects
<u>579</u>	Strobe (e.g., ball tracker)
580	Geometric transformation
<u>581</u>	Size change
582	Color signal
<u>583</u>	Rotation
<u>584</u>	Combining plural sources
	··

505	Including priority toxy
<u>585</u>	Including priority key
<u>586</u>	Foreground/background insertion
<u>587</u>	Including hue detection (e.g., chroma key)
<u>588</u>	Multiple distinct images (e.g., splitscreen)
<u>589</u>	Including insertion of characters or graphics (e.g., titles)
<u>590</u>	Specified details of key signal generation or processing
<u>591</u>	Self keyers (e.g., key generated from video being mixed
<u>592</u>	Chroma key (e.g., hue detector)
<u>593 </u>	Artificial key generation
<u>594</u>	Wipes signal generator
595	Fades signal generator
596	Window signal generator (e.g., rectangle)
597	For generation of soft edge (e.g., blending)
598	Specified details of signal combining
<u>599</u>	Color signal
600	Graphic or character insertion type
	Graphic of character insertion type Marker or pointer generator
601	
602	Display controlled by ambient light
<u>603</u>	Specified color (e.g., saturation and contrast control)
<u>604</u>	Including nonstandard signal detection controlling processing
<u>605</u>	Including vertical interval reference (e.g., VIR)
<u>606</u>	. Combined noise reduction and transition sharpening
<u>607</u>	. Noise or undesired signal reduction
<u>608</u>	Processing at encoder or transmitter (e.g., pre-correction)
<u>609</u>	Reduction of chrominance luminance cross-talk (e.g., precomb)
610	Adaptive
611	To suppress echo
612	Color signals
613	Complementary system (e.g., preemphasis - deemphasis)
614	Ghost elimination (e.g., multipath)
615	Blackspot or shading correction (e.g., corrects for fixed pattern defects)
616	Dropout compensator (e.g., replacement type)
617	For color television
618	For removal of low amplitude random noise (e.g., variable bandwidth)
619 620	Averaging type
<u>620</u>	Using frame or field delays (e.g., motion adaptive)
<u>621</u>	For color television
<u>622</u>	Noise component generator, limiter, subtractor type
<u>623</u>	Coring type
<u>624</u>	For color television
<u>625</u>	Transition or edge sharpeners
<u>626</u>	Scanning velocity modulation
<u>627</u>	Including processing to prevent the addition of noise (e.g., coring enhancement signal, noise responsive
	peaking control)
<u>628</u>	Vertical transition
<u>629</u>	Including horizontal transition
630	Color television processing
631	Luminance transition controls chrominance transition
632	. Sound muting
633	Including picture blanking
634	. Picture blanking
635	For color television
636	At transmitter
637	Retrace type
638	. Chrominance signal demodulator
639	Digital
640	PAL signal
641	For quadrature signal (e.g., NTSC)
642	. Color encoder or chrominance signal modulator
643	. Color killer
<u>644</u>	Including chrominance signal amplitude control

705

. Switching

. Chrominance signal amplitude control (e.g., saturation) 645 646 .. Digital .. Automatic 647 ... Picture responsive (e.g., overload) 648 649 . Hue control .. Scene by scene color correction 650 .. Digital 651 .. Fleshtone corrector (e.g., fixed) <u>652</u> ... By phase change of chrominance signal or subcarrier <u>653</u> 654 .. By phase change of chrominance signal or subcarrier 655 . Color balance or temperature (e.g., white balance) .. Receiver type <u>656</u> ... Including feedback control <u>657</u> <u>658</u> Including optical sensor to observe display (e.g., CRT) <u>659</u> . Matrixing or mixing .. Digital <u>660</u> 661 .. Masking (e.g., R, G, B to R', G', B') 662 . Chrominance phase adjuster (e.g., inverter) . Chrominance-luminance signal separation 663 .. Logic circuit type 664 .. Including comb filter (e.g., using line, field, frame delays) 665 ... Including adaptive artifacts removal (e.g., switchable trap or LPF in luma channel) 666 ... Adaptive comb filter 667 Selects or blends two or more separated signals to derive output 668 <u>669</u> Including frame or field delays (e.g., motion adaptive) <u>670</u> ... Including frame or field delays 671 . Gray scale transformation 672 .. Using histogram .. Combined contrast control and brightness or DC level control <u>673</u> 674 .. Nonlinear amplitude modification (e.g., gamma) 675 ... Color television ... By adding outputs from parallel channels <u>676</u> ... With specified DC level control <u>677</u> 678 ..                .. Involving block coding (348/420)
FOR137
               ... PCM represents minimum, maximum, or average of block (348/421)
FOR138
               .. Involving vector quantization (348/422)
FOR139
               .. Arrangements for multiplexing one video signal, one or more audio signals, and a synchronizing signal
               (348/423)
FOR140
               .. Sub-Nyquist sampling (348/424)
FOR141
               ... Adaptive (348/425)
FOR142
               .. Associated signal processing (348/845)
FOR 143
               ... Involving error detection or correction (348/845.1)
FOR 144
               ... Involving signal formatting (348/845.2)
FOR 145
               ... Involving synchronization (348/845.3)
FOR 146
               . Format type (e.g., HDTV or EDTV) (348/426)
FOR147
               .. Including frequency folding (e.g., subsampling) (348/427)
FOR148
               ... Spotwobble (e.g., pixels from plural lines form single transmitted line) (348/428)
FOR149
               ... Including video related information (e.g., digitally assisted television) (348/429)
FOR 150
               ... Using two or more frames (348/430)
FOR 151
               .... Motion adaptive (348/431)
FOR152
               .. Added video information in standard channel format (e.g., compatible EDTV) (348/432)
FOR153
               ... Including additional modulation of picture carrier (e.g., quadrature) (348/433)
               ... Including information in sync, blanking, or overscan (348/434)
FOR154
FOR 155
               .... During vertical blanking interval (348/435)
FOR 156
               ... Including the use of a subcarrier (348/436)
FOR157
               .. Individual processing of different parts of image frequency band (e.g., sum and difference, high band/low
               band) (348/437)
FOR158
               . Individual processing of different parts of image frequency band (e.g., sum and difference, high band/low
               band) (438/438)
FOR159
               Frame field or line dropping followed by time expansion and time compression (348/439)
FOR 160
               . Scan rate variation (348/440)
               CAMERA, SYSTEM AND DETAIL (348/207)
FOR 161
               . With electronic viewfinder or display monitor (348/333)
FOR 162
               .. With indicium (348/334)
FOR 163
               USE SURVEY AND ACCOUNTING (348/1)
FOR 164
               . Monitoring of physical reaction of viewer (348/2)
               . With billing (348/3)
FOR 165
FOR 166
               . Monitoring of synchronization or blanking pulse (e.g., horizontal or vertical pulse signal) (348/4)
FOR 167
               . With video cassette recorder (VCR) (348/5)
               USE OR ACCESS BLOCKING (E.G., LOCKING SWITCH) (348/5.5)
FOR 168
FOR169
               WIRED BROADCAST (E.G., CABLE) (348/6)
FOR170
               . Broadcast on demand (348/7)
FOR171
               . Local distribution (e.g., hotel, hospital, vehicle, etc.) (348/8)
FOR 172
               . Controlled signal substitution (e.g., emergency warning, local preemption, etc.) (348/9)
```

<u>FOR173</u>	. With subscriber terminal details (348/10)
FOR174	For frequency conversion (348/11)
FOR175	. Two-way (348/12)
FOR176	TWO-WAY (E.G., INTERACTIVE) (348/13)
FOR177	With voice capability (e.g., videophone) (348/14)
FOR178	Conferencing (348/15)
FOR179	Switching (348/16)
FOR180	Transmission scheme (348/17)
FOR181	Still frame (i.e., freeze frame) (348/18)
FOR182	Field or frame difference (e.g., moving frame) (348/19)
FOR183	User positioning (e.g., parallax) (348/20)
